

# AUDIFFEX GK AMPLIFICATION 2

GUARANTEES QUALITY.  
AND THAT'S THAT!

Do you know what bands like Red Hot Chili Peppers, Velvet Revolver, Avenged Sevenfold, Def Leppard, Extreme, No Doubt, or Aerosmith have in common? Bass amplifiers Gallien-Krueger that members of these world-known groups use. GK Amplification 2 brings the opportunity to create a sound of your own that possesses all qualities of hardware models. A bass guitar, computer and sound card is all you need. Playing skills or genre preferences are unimportant. Provide your bass guitar with sound and color that you have always desired!

## WHAT IS GK AMPLIFICATION 2?

- It presents a perfect simulator of bass amplifiers of the same brand in the form of an effect plug-in as well as a standalone software application.

## PRODUCT CHARACTERISTICS:

- It is, above all, capable of creating true bass guitar sounds by means of a computer and external sound card, which frees you of laborious manipulation with a real rig.
- The independent combination of bass amplifiers, speakers and pick-up microphones brings its users an inventory of most true-to-life sounds that are hardly recognizable from real bass gear.
- Contains all control features identical with original models, including bi-amp section.
- It functions not only as a standalone application, but also as a plug-in for a number of DAWs.

## OPTIONS FOR UTILIZATION:

- Its wide range of utilization involves both occasional musicians having music as their hobby and professional players who can make use of GK Amplification 2 not only during recording sessions but also for live performances.

## SPECIFICATIONS:

- 3 bass amp models (MB150 Combo, 800RB Amplifier, 2001RB Amplifier) and 3 speakers (NEO 412, RBH 410, MB150 Combo).
- 2 independent speakers placed after the amplifier for left and right channel or in bi-amp connection (only in Pro version).
- 3D positioning of the pick-up microphone, including pick-up angle.
- 'Limiter' function to prevent the output from exceeding the threshold and 'Learn' function enabling optimal volume setting
- 64-bit AU and VST3 versions enable full compatibility with 64-bit host DAWs. Formats for ProTools are also supported.
- The standalone version contains metronome, playback player and recorder.
- Compatible for such host applications as Cubase, Ableton Live, ProTools, GarageBand, Logic, Reaper and others.
- Available in Standard and Pro versions.
