Live VR/AR Video Production

VC-A71P supports the popular FreeD protocol which outputs the camera's positional data over IP in real-time. This enables users to work with state-of-the-art Virtual Reality and Augmented Reality sets without the need for additional sensors.

Face Recognition Autofocus System

Equipped with Lumens' Smart AF algorithm, VC-A71P can intelligently identify human faces and automatically detect the eyes and mouth. This enables the camera to keep the subject in sharp focus all the time.

Easy Operability & Fast Communication

With a top-mounted tally light, the VC-A71P notifies the crew and talent which camera is currently in use. It provides clear communication and is especially useful in multi-camera productions and broadcast studios.

High-Precision Camera Position

With high-precision motor control and Lumens' advanced transmission mechanism, the VC-A71P achieves high-speed pan and tilt at up-to 300° per second. Camera movement is smooth and judder-free, even at low speeds.
